

The great specialist in concrete structures

STRUCTURES AND CONCRETE

A SOLID AND MODERN COMPANY

For more than 20 years of work and activity, ESHOR is, at present, one of the most important companies specialised on concrete structure construction.

The achieved turnover is the result of a constant preoccupation with quality and satisfaction with the customer.

The re-investment in research and development of new competitive technologies at international level gets us, at the same time, as the Spanish leaders in our sector.

A COMPANY WITH A HUGE PRODUCTION CAPACITY

An accurate selection and training of our professionals and logistics applied on our technical, administration departments, warehouse and workshops, allow us to reach a monthly production capacity of 85.000 m², with enough resources available to carry out several national and international actions.

OWN FORMWORK SYSTEM

Eshor has developed several form systems patented with the trade-mark ROCBLAN, what allows us to perform, with the same staff, the same job as our competitors with the 30% of savings in hours.

Our department of R+D is at the top of new elements research and techniques to reduce execution time increasing at the same time quality and safety.

We have our own mechanical workshops manufacturing these systems which allows more autonomy in distribution and assembly.

The previous study of each work by the technical department, guarantees the suitable system to be applied, optimising expenses and resources based on their specific features.

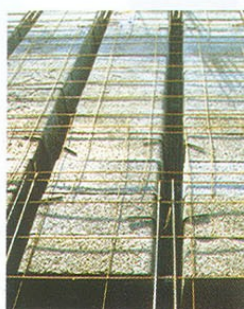

Foundations and Walling

Redesign and Assembly of Pillar Frames

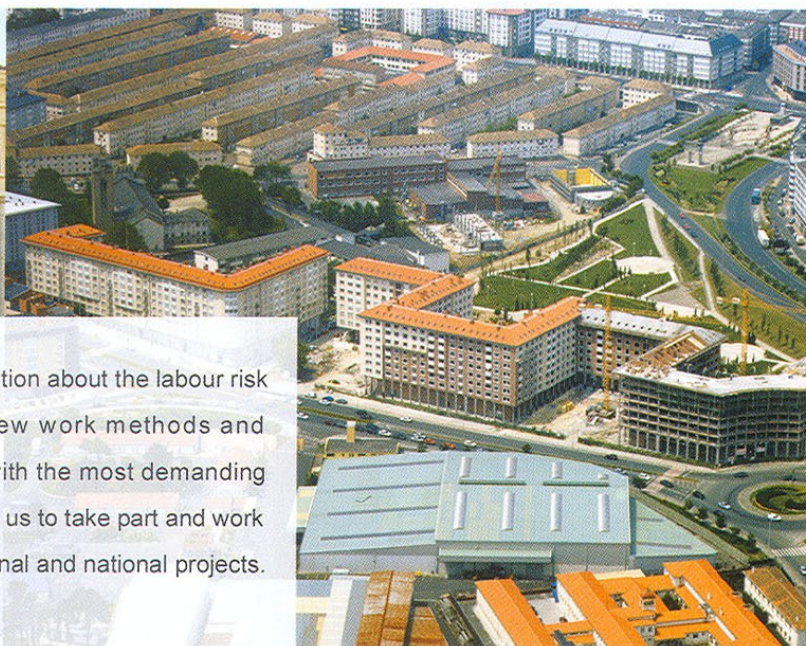

Formwork Frames

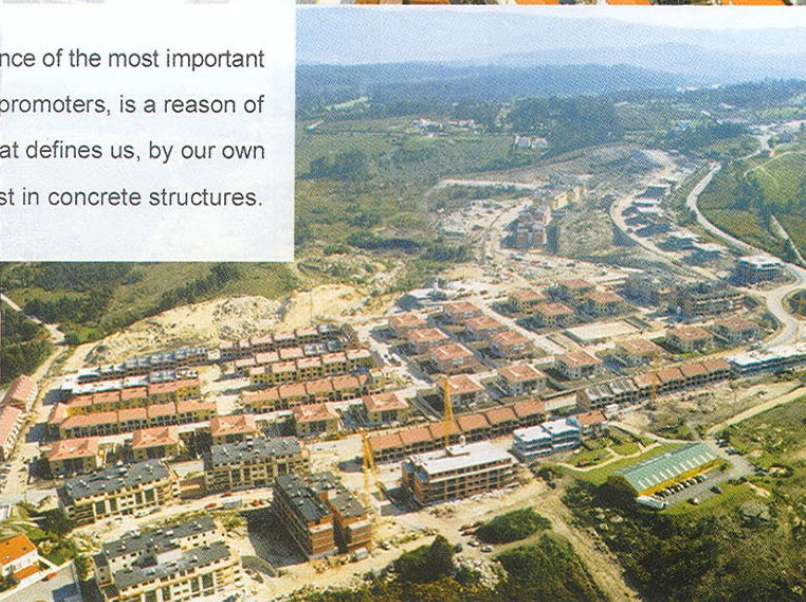

Reinforcement and Layout of Framework S. V.

The constant preoccupation about the labour risk factors, developing new work methods and complying accurately with the most demanding safety regulations, leads us to take part and work in the greatest international and national projects.

To enjoy with the confidence of the most important building companies and promoters, is a reason of satisfaction and proud that defines us, by our own merits, as great specialist in concrete structures.
